

SREEKARAN SRINATH

ss@sreekaran.com • in/sreekaransrinath • +1(415) 529-6986

Software engineer with 4 years of experience building scalable platforms across startups and enterprises, bridging infra, UI, APIs, NLP, product development, and developer relations. **Work Authorization: U.S. Citizen**

EXPERIENCE

Software Engineer II

Feb 2023 – Present

Boeing

New Providence, NJ

- Optimized React + TypeScript stack for mission-critical intelligence software, reducing load times by **35%**.
- Automated API dependency management and versioning, cutting build errors by **40%**.
- Standardized design and slashed dev time by **75%** by leading a UI migration effort to MUI CRUD components.
- Led a state management migration from Recoil to Redux, fixing stability issues and state-related bugs.
- Cut deployment time in **half** by streamlining deployment processes and CI/CD pipelines with automated scripts.
- Achieved **90%** test coverage for core systems with unit and integration tests (**Jest and PyTest**).

Software Engineer

May 2021 – May 2022

Codemantra

Boston, MA (Remote)

- Built APIs for multi-format document processing, increasing accuracy and cutting content transformation time by **60%**.
- Built libraries for PDF object detection, extraction, validation, and manipulation, improving processing efficiency.
- Improved document usability by building Flask APIs to automate accessibility enhancements.
- Delivered resilient Python and Java content management solutions, handling rapidly changing specs with **99%** uptime.

Developer Advocate Consultant (Contract)

Aug 2021 – Apr 2022

Dasha AI

White Plains, NY (Remote)

- Cutting-edge NLU and NLP frameworks for developer-focused conversational AI.
- Organized 4 hackathons in 7 months (~ **700** participants/hackathon), driving outreach + education.
- Scaled dev engagement: **100x** growth in webpage visits → first API hit → deployed projects.
- Built core dev resources: docs(*docs.dasha.ai*), sandbox(*playground.dasha.ai*), demo apps, and GPT integrations.
- Led team of **3** developer advocates, and grew Twitter (**0** → **6K**) and Discord (**0** → **10K**) communities from scratch.

Software Engineer

Jun 2020 – Feb 2021

SPI Edge

Chennai, India

- Think tank/startup accelerator turning ideas into MVPs and scaling them from 1 to 10.
- Built Python-JS habit-tracking via WhatsApp + React dashboards, boosting streaks by **50%** for over **200** beta users.
- Led an accelerator team to get **15** hackathon-winning teams from zero to one, turning their ideas into start-ups.

SKILLS

Languages: Python, TypeScript, JavaScript, HTML/CSS, PostgreSQL, Java, Go, GraphQL

Frameworks: React.js, Node.js, FastAPI, Recoil.js, Redux.js, Flask, TensorFlow, Keras, Neural Networks, LLMs

Tools: AWS, Selenium, Terraform, Git, Docker, Linux, Kubernetes, CI/CD, Speech Processing

EDUCATION AND CERTIFICATIONS

Georgia Institute of Technology

Aug 2024 – May 2026

Master of Science, Computer Science (Machine Learning) (Part-time, Online); GPA: 4.0

Atlanta, GA

Anna University

Aug 2017 – Apr 2021

Bachelor of Engineering, Electronics and Communications Engineering

Chennai, India

Linux Foundation Certified Kubernetes Application Developer

Apr 2024

PUBLICATIONS

Athena | Deep Learning, Python, TensorFlow, Keras, Librosa, Speech Recognition, Neural Networks

- Deep Learning-based system to detect and fix mispronunciations. **Paper:** doi.org/10.22214/ijraset.2021.37234
- Neural-driven phoneme classifier engineered MFCC/STFT feature extraction from TIMIT corpus (6300 samples) to map articulatory kinematics via IPA-phoneme lookup tables.
- Real-time pronunciation corrector prototype leveraging Librosa/Keras stack delivered biomechanical feedback for 61 CMU phonemes, addressing L2 speaker vowel-consonant shifts through spectral contrast analysis and acoustic features.
